Hussein Ismael Ibrahim

Computer network stage 4

1. What is the web development and what are types of it?

Website development is the process of designing, building, and maintaining a website. Websites are essential for businesses of all sizes to connect with customers and build a brand. There are many different types of website development, including web design, web development, and online marketing.

Types of Web Development

There are three main types of web development: front-end development, back-end development, and full stack development.

2. What is difference between web developers and web designers?

Web designers create a website's look and feel, and web developers create the code to make it work. Site designers and site developers often work together, but their job functions are different.

So much of our everyday lives operate through websites.

3. Is the best for web developer to be full stack development or just one type of development?

Full-stack developers command the [higher salary](#) package than front end or back end developers. Employers are willing to pay more for a full stack developer because it makes more business sense to hire an individual with front and back end skills, rather than getting two people to do the same job.
